INTERNATIONAL TOURISM PERFORMANCE

Foreword

As the tourism marketing arm of the South African Government, South African Tourism has developed an integrated marketing strategy that focuses on leisure and business events. Part of our business is to monitor and evaluate the performance of the tourism sector. This consolidated report prepared by the Strategic Research Unit provides a review of the performance of the tourism sector in 2016 against the South African Tourism mandate.

This report only provides a summary of tourism's performance and must be read in conjunction with the tables at the end of the report for the detail that inform the insights in this report.

This report by the Strategic Research Unit is also based on the systems and methodologies that were developed and applied from 2001. In 2002, South African Tourism extended the survey of departing foreign tourists at OR Tambo International Airport from only in summer and winter to throughout the year. In 2003, this was extended to Cape Town International Airport. The data collection was also expanded to include monthly surveys of the largest segment of foreign arrivals, land border arrivals. The sample is weighted to tourist arrivals as released by Statistics SA. These changes were made for more robust results as the sample sizes are larger and drawn in way that ensure representativeness.

In 2014, Statistics SA made changes to the release of its Tourism & Migration reports and now no longer report on transit arrivals. As a result of this change, the weighting methodology has been revised and the results in this report are now not comparable to reports prior to 2013. The 2016 Annual Report represents the third edition of a new series of Annual Reports.

While we have been able to track key metrics consistently over the years through our Departure Surveys. This report is based on

- Statistics SA's Tourism & Migration releases for 2016
- South African Tourism's monthly departure surveys conducted at OR Tambo International Airport and Cape Town International Airport as well as 12 land border posts during 2016
- Statistics SA's Tourism Satellite Account for South Africa
- Euromonitor's IMIS for Travel & Tourism
- UNWTO World Tourism Barometer, January 2017
- SA Tourism's monthly domestic tourism surveys

To access this report online please visit the research section on the South Africa Tourism website at www.southafrica.net/research or for more information e-mail: research@southafrica.net.

Disclaimer

The Strategic Research Unit makes every effort to publish reports that are error-free. However, with the large number of complex records that are analysed, we cannot guarantee that all reports are totally free of error. All errors that are detected are immediately corrected and the latest version of the report is always available on www.southafrica.net/research.

The data in this report is based on statistics collected by the Department of Home Affairs at ports of entry to South Africa. It is processed and released by StatsSA and SA Tourism uses these statistics in good faith.

Global International Tourist Arrivals:

Demand for international tourism remained robust in 2016 despite challenges. International tourist arrivals grew by 3.9% to reach a total of 1,235 million, according to the latest UNWTO World Tourism Barometer. Some 46 million more tourists (overnight visitors) travelled

WORLD: 1,235 MILLION

internationally last year compared to 2015. 2016 was the seventh consecutive year of sustained growth following the 2009 global economic and financial crisis. A comparable sequence of uninterrupted solid growth has not been recorded since the 1960s. As a result, 300 million more international tourists travelled the world in 2016 as compared to the pre-crisis record in 2008. International tourism receipts grew at a similar pace in this period (complete 2016 receipts results will be reported in May).

"Tourism has shown extraordinary strength and resilience in recent years, despite many challenges, particularly those related to safety and security. Yet, international travel continues to grow strongly and contribute to job creation and the wellbeing of communities around the world", said UNWTO Secretary-General Taleb Rifai.

By region, Asia and the Pacific (+8%) led growth in international tourist arrivals in 2016, fuelled by strong demand from both intra- and interregional source markets. Africa (+8%) enjoyed a strong rebound after two weaker years. In the Americas (+4%) the positive momentum continued. Europe (+2%) showed rather mixed results, with double-digit growth in some destinations offset by decreases in others. Demand in the Middle East (-4%) was also uneven, with positive results in some destinations, but declines in others.

Recalling that 2017 has been designated by the United Nations the International Year of Sustainable Tourism for Development, Mr. Rifai said "we need to work closer together to harness the contribution of tourism to economic growth, social inclusion, cultural and environmental preservation and mutual understanding, particularly when we live in times with such a deficit of respect and tolerance".

Experts remain optimistic about 2017

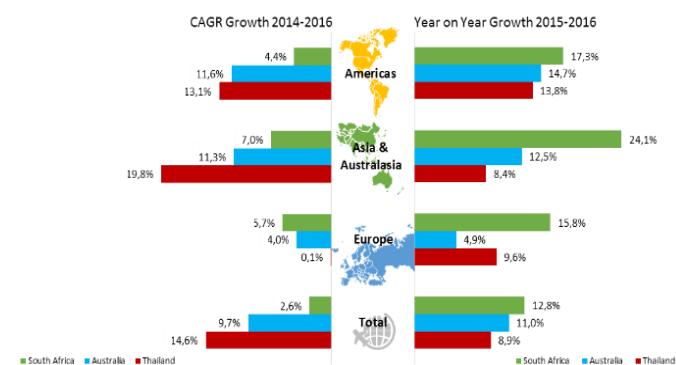

The latest survey of UNWTO's Panel of Experts shows continued confidence in 2017, with the large majority (63%) of some 300 respondents expecting 'better' or 'much better' results than in 2016. The Panel score for 2017 virtually

equals that of 2016, so growth is expected to be maintained at a similar level. Based on current trends, the outlook of the UNWTO Panel of Experts and economic prospects, UNWTO projects international tourist

arrivals worldwide to grow at a rate of 3% to 4% in 2017. Europe is expected to grow at 2% to 3%, Asia and the Pacific and Africa both at 5% to 6%, the Americas at 4% to 5% and the Middle East at 2% to 5%, given the higher volatility in the region.

Emerging markets lead growth, Asia & Australasia growing by 8.4% and Africa growing by 8.1% from 2015. Sub-Saharan Africa grew by 10.7% from last year and South Africa was the main driver of that growth as it grew in double digits (12.8%) to reach over 10.0 million tourists in 2016.

South Africa benchmark its performance against two major destination destinations (Australia and Thailand) and in the review period South Africa outperformed these two destinations. Although we have to caution though that SA CAGR growth from 2014 remains well behind both competitors except for the European region.

Tourism Outlook: 2030

The number of international tourist arrivals generated in the world is set to increase from 14 per 100 in 2010 to 22 in 2030. This translates to a total of 1,809 tourists.

Europe has the highest participation, which is expected to increase from 57 arrivals per 100 of population in 2010 to 89 in 2030. In the Americas the numbers are much lower as the region has a very large population that has only just started to take part in international tourism. Between 2010 and 2030 Asia and the Pacific will more than double its arrivals generated per 100 populations and is expected to double numbers from 5 to 12 in two decades. Africa has the lowest number of international arrivals generated per 100 of population and is expected to double numbers from 3 to 6 in two decades.

In the Americas the number of arrivals generated per 100 of population will grow from 17 to 24 and in the Middle East from 17 to 25. Travel between regions will continue to grow slightly faster than travel within the same region. The large majority of arrivals in 2030 originate from the same region: 1.4 billion (78%) compared with 0.4 billion from another region (22%). As growth rates vary, in fast growing outbound regions such as Asia and the Pacific the share of arrivals from within the region will still rise somewhat (from 78% in 2010 to 80% in 2030), while in slower growing outbound regions such as Europe it will be going down (from 87% in 2010 to 86% in 2030).

ANNUAL TOURISM PERFORMANCE 2016

Key highlights of South Africa's tourism performance in 2016

South Africa's tourism grew in tourist volumes by 2.8% compared to 2015 to a total of 34.3 million tourists. Domestic tourism although declining is the biggest contributor and is more than double the size of the international arrivals. South Africa growth in international tourist arrivals outgrew both our key benchmarking destination in year on year growth from all regions

A total tourism revenue of approximately R102.1 billion was injected in the south African economy in 2016. This is a 11.1% increase compared to 2015. Almost 70% (R75.5 billion) was generated from the international tourist. Although rand strengthen against the major currencies this did not deter tourist from visiting south Africa and spending patterns.

The number of nights per tourist was around 4 nights while the international tourist stayed around 9 nights. For International Tourist this is slightly shorter than usual while domestic travel trip was slightly longer. Bed-nights increased to a record high of 192.2 million nights. Among domestic tourists the increased average length of stay was the main driver of bed-nights growth while among international tourist's volume was the main driver as average length of stay was down. The challenge is that majority of those bed nights were spent in unpaid establishments. Opportunity lies in converting those nights into a formal sector.

There was an improvement in the number of provinces tourist visited. This was true for both domestic and International tourists. For tourism to contribute meaningful to the spread of the economy we need to continue ensuring that this measure improves.

Tourism is a very seasonal industry. South Africa as destination seasonality worsened among domestic tourists and was consistent among international tourists. For ensure that our industry can create meaningful jobs we need to ensure that the is continuous improvement in our seasonality score.

Tourism Market size

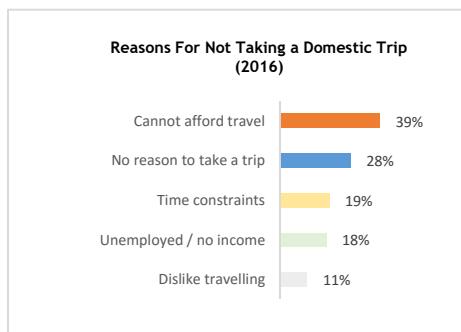

In 2016 the market size of tourism in SA reached **34.3Mn trips** (**24.3Mn domestic trips** and **10.0Mn international arrivals**) this is a **2.8% growth** compared to the **33.4Mn** in 2015.

Domestic tourism market size: although shrinking (-0.8% FROM 24.5Mn trips) due to unfavourable economic condition is still by far the biggest contributor in volume terms. The volume size of domestic trips has been on a steady decline since 2014. Trips are mainly affected by two factors; number of people travelling and how often they chose to travel. In 2016 fewer people (11.7Mn) decided to travel than usual however the positive is that those who have travelled increased their frequency of travelling from 2.0 to 2.1 trips.

Fewer Tourists took a trip in 2016 and despite the increase in the average number trips taken by each tourist; Total trips decreased by -0.8% in 2016

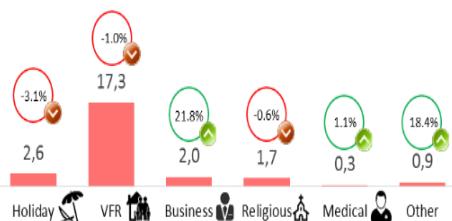

Among the reasons for not travelling affordability (39%)

remains the main reason for South Africans not to take a trip and This has been the main reason for years. The south African tourism marketing campaign is

aiming to address this challenge by offering affordable travels deals that will entice travellers to start travel. The other stated barriers for travel are; No reason to travel (28%) and time constraints (19%).

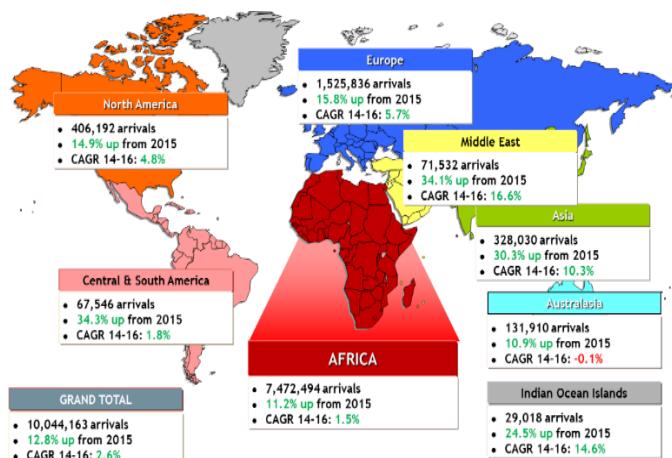

The decline in domestic trips was driven by declines in

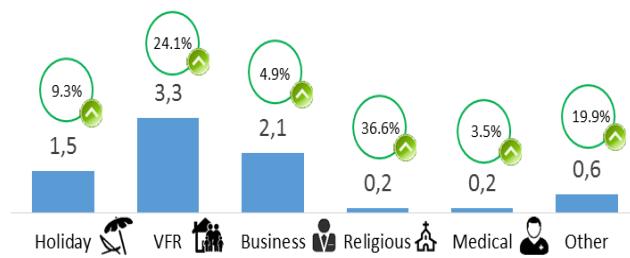

Holiday and VFR trips, which both had decreases of -3.1% and -1.0%

respectively. Business trips and tourist travelling for other purposes grew by 21.8% and 18.4%. However, the double-digit growth in business and other trips had a minimal impact on overall trips as they only account for a smaller share.

International tourist arrivals: have fully recovered from the 2015 decline and grew by 12.8% to reach a record high of 10.0Mn arrivals. This means that an additional 1.1Mn tourists have chosen to visit south Africa compared to other destinations. The growth in international tourist arrivals to South Africa were driven by the increase in arrivals across all regions with Central & South America, Middle East and Asia growing by over 30% (albeit from small base) while other regions grew in double-digit.

International tourist who came to south Africa for the purpose of visiting friends and relatives was mentioned as the main reason why tourist visited in 2016. It grew by 24.1% to reach 3.3Mn tourists. Holiday tourist grew by 9.3% while MICE contracted by -7.3%.

Religious and medical tourism recorded strong growth although from a very small base. In MICE segment there was a decline specifically in tourist coming for conventions (-18.6%) and Exhibitions (-3.1%) while Meetings and Incentives recorded an increase.

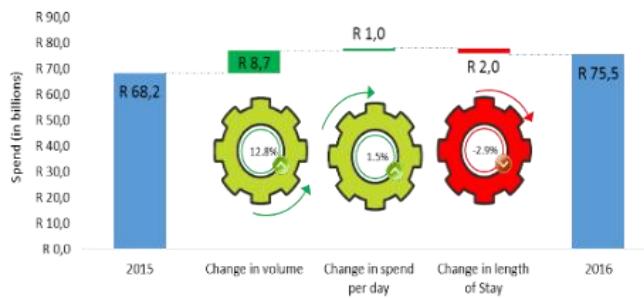

Tourism market value size

In 2016 tourism market value size of tourism reached R102Bn (*domestic R26.5Bn, international R75.5Bn*) and this is 11.1% increase than the R91.8Bn in 2015.

Domestic tourist's revenue: increased by 12.3% from R23.6 billion in 2015. This increase in domestic revenue was driven by tourists spending R20 more per day than usual and this resulted to additional R2.7 billion. Tourist increased the length of their holiday by 1.6% and this resulted to R0.4 billion in 2016. The domestic tourists who took a trip in this period spent more per trip and stayed longer than previous years.

International tourist revenue: increased by 10.8% to record R75.5 billion. The growth in spent was driven by change in volume resulting in R8.7 billion; spend per day increased by 1.5% resulting to additional R1 billion rand,

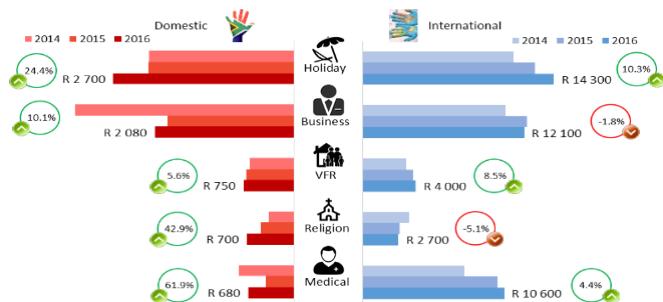

average length of stay dipped by -2.9% and resulted to a loss of close to R2 billion. The Rand strengthened against most currencies across the world; the currencies that weakened the most in 2016 were the Mozambican Metical, Nigerian Naira, Angolan Kwanza and the British Pound. Despite the weaker currencies the tourists spend grew in each of the regions.

Tourist spend most of their money on shopping for personal items, this category was estimated at R26 billion in 2016 and it grew by 16.4%. The tourism sector benefited from the increase in international tourist

arrivals as money pend on food, transport and leisure related actives all grew. The only sector that remained stable was accommodation.

Holiday tourists drove the increase in spend both among domestic (24.4%) and international tourists (10.3%). Among domestic tourist's business, medical and religious tourists saw double digit growth in spend while VFR tourist spend grew by 5.6%. Among international tourists only VFR and medical tourists spend grew while business and religious tourists spent less in 2016.

MICE tourists spend contracted for both the Domestic and International by -20.7% and -15.0% respectively.

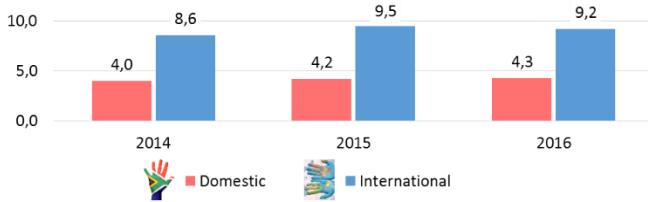

In a separate SAT study that tracks the impact of MICE tourism, shows that the average spent per MICE tourist is R31 817. In this study the focus is tracking expenditure on delegates attending ICCA registersd events. The hypothesis is that delegates attending other non ICCA events spend slightly less than that hence the average spend on business is R12 100.

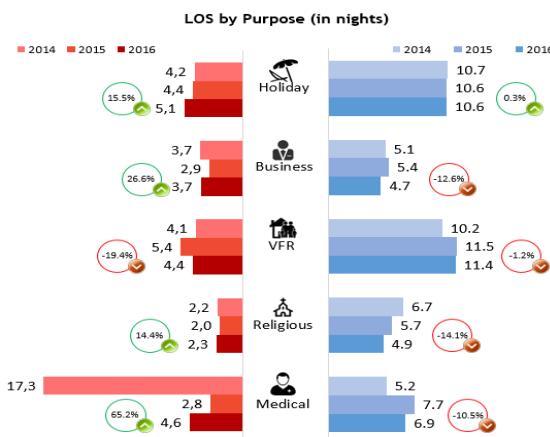

Length of stay & Bed-nights

When taking a trip domestic travellers take around 4 days while international tourist turns to take longer at around 9 nights.

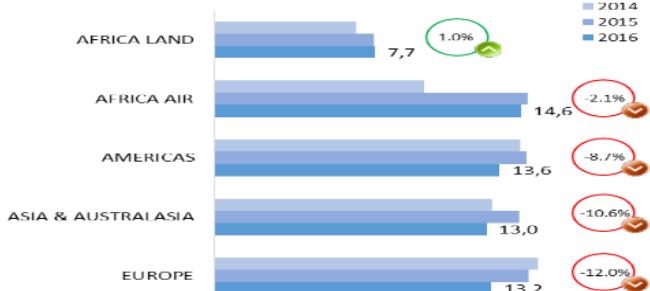

Domestic length of stay grew by 1.6% in 2016 to 4.3 nights. This growth was seen through increased length of stay across tourists of all-purpose categories with the only exception being among the largest segment VFR tourists who declined by 1 night. International tourist length of stay decline (-2.9%) to 9.2 nights in 2016. This decline in average length of stay was across all purpose categories except Holiday tourists whose length of stay remained stable at 10.6 nights.

Business and Medical tourists' bed-nights declined by -8.5% and -7.7% respectively.

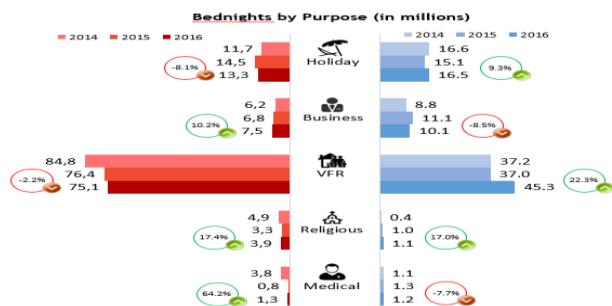

The Africa-Land markets are the only region to show a slightly increase of 1.0% in average length of stay to 7.7 nights. Europe and Asia & Australasia were the principal drivers of the decline in length of stay, down -12.0% and -10.6% respectively. Americas and Africa-Air also

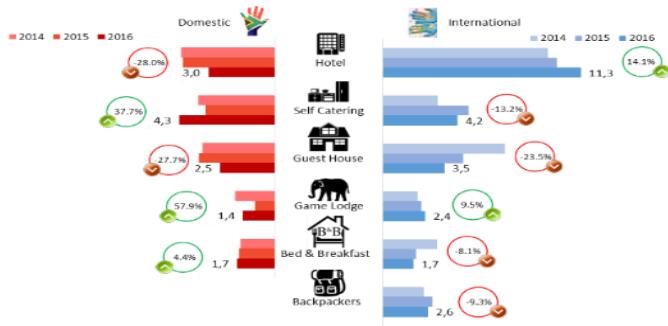

declined, down -8.7% and -2.1% respectively.

Bed-nights in South Africa grew 4.6% from 2015 to reach 192.2 million. Bed-Nights by International tourists' increased by 9.2% to reach 88.8 million in 2016. Domestic bed-nights increased at a slower pace (0.9%) to reach 103.4 million in 2016. Domestic bed-nights increased slightly from 102.5 million in 2015 to 103.4 million in 2016.

This growth in bed-nights was despite a decline of -2.2% and -8.1% respectively in bed-nights among Holiday and VFR tourists who account for a combined share of 85.5% of bed-nights. Medical, Religious and Business tourists' bed-nights grew by double-digits, increasing by 64.2%, 17.4% and 10.2% respectively and made up for the losses from Holiday and VFR. From an international perspective Holiday, VFR and Religious tourists were the drivers of

Bed-nights in formal accommodation sector (i.e. Hotels, B&B's, Guesthouses, Game lodges, Self-catering units and backpackers) make up only 20.1% of all bed-nights and this declined by -2.2% to reach 38.7 million bed-nights in 2016. Hotel usage by domestic tourist declined while the usage by international tourist increased. The usage of Game lodges by both domestic and international tourist has increased. Self-catering units were very popular among domestic tourist and grew significantly in 2016.

Spend on accommodation: by tourists saw an overall decrease of -0.4% to reach just under R12.0 billion in 2016 from slightly over R12.0 billion in 2015. International tourists account for just under two thirds

of all accommodation spend by tourists (R7.8 billion in 2016) and domestic tourists contribute the remaining third (R4.2 billion). The decrease in spend was driven by a -10.9% decline in international tourists spend on accommodation in 2016 from R8.7 billion in 2015. Domestic tourists in contrast spent 27.2% more on accommodation in 2016 from R3.3 billion in 2015.

The increase in domestic accommodation spend was driven by Holiday and Business tourists who make up 89.8% of domestic tourists spend on accommodation. Holiday and Business also make up the bulk of accommodation spend among International tourists (89.4%). International Business tourists were the main driver of the dip in spend on accommodation; with a drop of -27.1% in 2016 to reach R 2.3 billion from R3.2 billion in 2015. Holiday spend on accommodation grew by 8.3%, however this was not sufficient to make up the loss in Business spend.

MICE tourists were the driver of the International Business accommodation spend declines, down -41.8% compared to 2015 to reach R1.3 billion in 2016.

SOUTH AFRICAN TOURISM

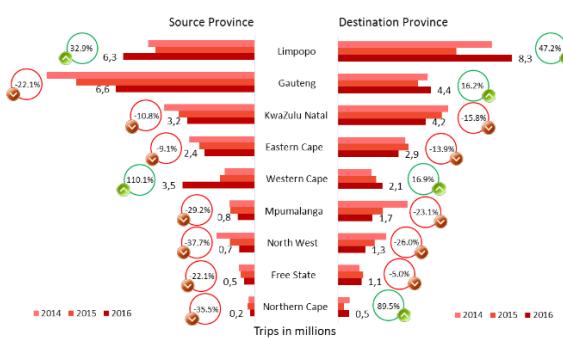

Geographic spread:

Improved in 2016 for both domestic and international tourists. Domestic provincial spread improved with 9.7% of tourists visiting more than one province in 2016 compared to 2.5% in 2015. International tourists also saw an improvement with 15.2% of tourists visiting more than one province in 2016. The most visited province in 2016 was Limpopo with 9.9 tourist and it was followed by Gauteng by 8.8 tourist. Eastern Cape, KZN, Mpumalanga and North West lost compared to 2015.

Domestic trips source vs destination province: Western Cape and Limpopo grew in trips to other provinces. Northern Cape, Limpopo, Western Cape and Gauteng saw increases in tourists coming into their province

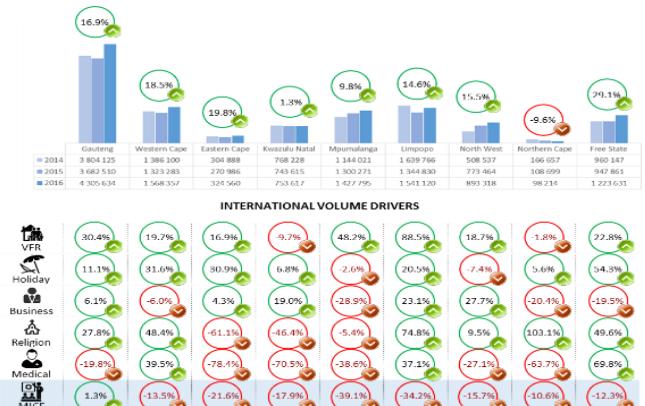

growing by 89.5%, 47.2%, 19.9% and 16.2% respectively from 2015. VFR makes up 72.4% of Domestic trips and any growth or decline has a greater impact on the volume for the province as a whole. Gauteng, Western Cape, Limpopo and Northern Cape had growth in VFR trips that was a major driver of the growth in trips in 2016. Holiday, Business, religion and Medical tourist's growth or decline has little to no impact on Domestic volume.

International provincial spread: All provinces saw growth in share of International tourists in 2016 and Free State led growth. Northern Cape was the only province to decline in 2016 with -9.6% less International tourists and has been on a downward trend.

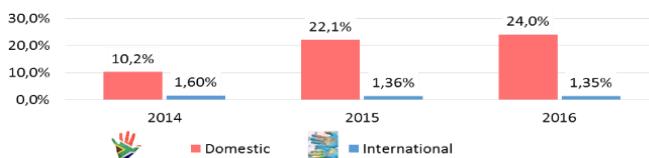

Mpumalanga and North West are the only province not to see a dip in 2015 and continued to grow in 2016. VFR makes up 38.5% of International tourist volume, while Holiday and Business make up 22.1% and 20.8% respectively. These three purposes are 81.4% of all

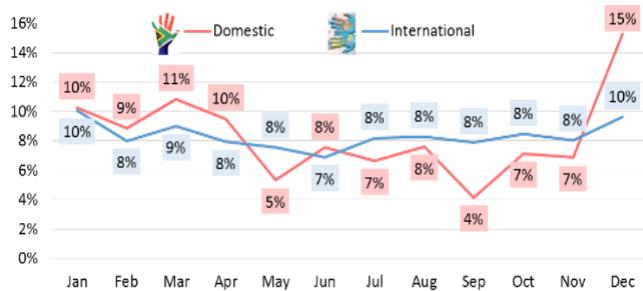

International tourists and any growth or decline has a greater impact on the volume for the province as a whole. Religion and Medical tourist's growth or decline has little to no impact on International tourist volume.

Seasonality Index: is a measure of the distribution of tourists through the months in a year. It measures the variance between months to give a score how varied or similar the tourist volume in each of the months is. The lower a Seasonality score the less varied the tourist

volume from month which indicates an even spread of tourists throughout the year. Seasonality therefore improves if the index score gets smaller and worsens if the index score is higher than previous years.

Seasonality worsened in 2016 domestic tourists with

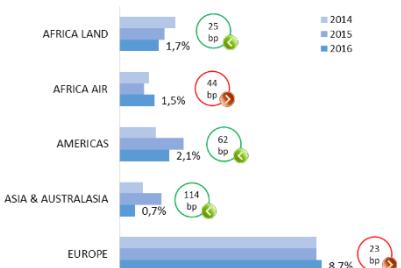

Seasonality Index increasing by 19 basis points (1.9%) to reach 24.0% in 2016 from a Seasonality Index of 22.1% in 2015. International tourists remained relatively stable

to reach 1.3% in 2016 from 1.4% in 2015, which is a minor improvement (1 basis point).

Domestic seasonality worsened despite an increase in trips taken in the first quarter of 2016 compared to 2015. Trips in other quarters contracted compared to 2015.

International seasonality remained stable, with a Seasonality Index score of 1.35% in 2016. January was the largest month for International tourist arrivals while December remains the largest travel month among Domestic tourists. International tourist arrivals increased in each quarter growing by 18.7%, 11.6%, 12.3% and 8.7% for each respective quarter.

Europe is the most seasonal region and the Seasonality Index worsened to 8.7%. Africa-Air also saw worsening seasonality, while Africa-Land, Americas and Asia & Australasia improved on seasonality. Asia & Australasia has the lowest Seasonality Index and growing tourist arrivals from that region will go a long way to improve the seasonality further.

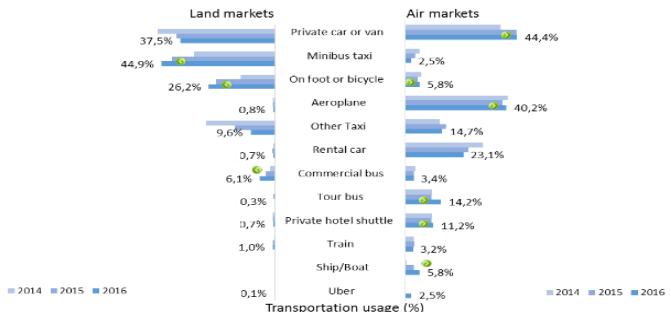

Transportation Sector: is the 3rd largest spend category among tourists (was second last year, however was overtaken by Food) and it grew in 2016 by 8.5% to reach R15.6 billion. The biggest contributor to transportation spend is domestic tourists (R10.2 billion) whose spend was 14.6% higher in 2016, while International tourists spend slumped by -1.4% to R5.4 billion in 2016. The decline in transportation spend among International tourists was driven by land tourists who spent -15.8% less on transportation in 2016.

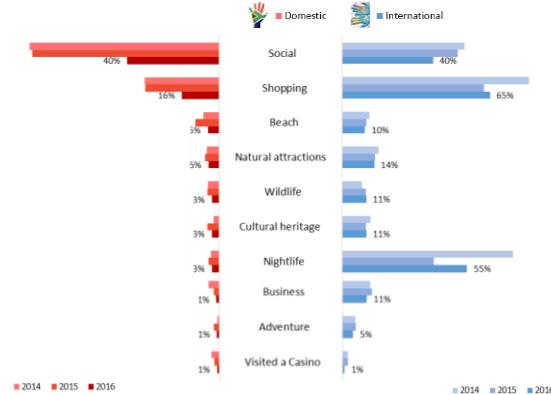

More than 50% of domestic tourist use minibus taxis to travel to South Africa. Private car ('my own car') the next most used mode of transport among domestic tourists grew in usage alongside aeroplanes, trains, foot or bicycle and tour buses.

International Air market tourist when in SA 44% of them use private cars the most to commute around. Aeroplanes are the second biggest mode of transport. Rental share decreased in 2015 while tour busses increase. Rental cars and other taxis are the two modes with the largest declines and contracted among both land and air markets. Minibuses, walking or cycling and buses have seen increased usage among tourists from land markets while private and rental cars saw the largest decline. Among air markets tour buses, boats and aeroplanes lead the growth, while other modes grew marginally or declined. The Uber service could be affecting the car rental usage hence the decline. Passenger movement data collected at ACSA airports saw growth in domestic, regional and overseas travellers. The growth is led by regional traffic (African travellers), increased by 6.0% from 2015 to reach 0.6 million passengers in 2016.

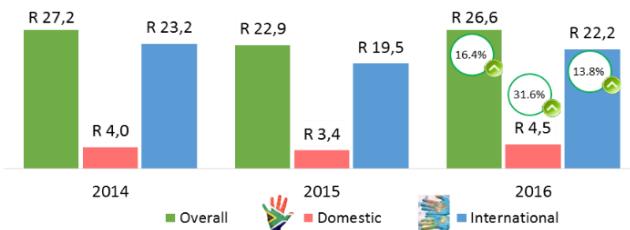

Attraction and Activities engaged on: Socialising, Shopping and Beach are the top activities engaged in by Domestic tourists in 2016. Shopping, Nightlife and Socialising are the top activities among International tourists and have been the Top 3 for the past few years.

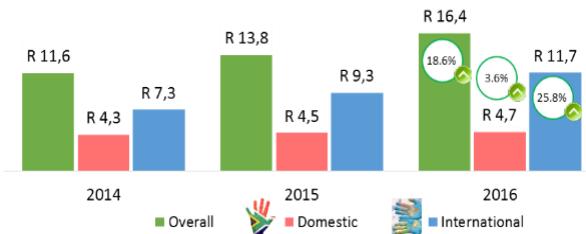

Shopping malls are among the top attractions and landmarks visited by tourists and this is not surprising with Shopping being the top activity among International tourists and second among Domestic tourists.

The largest spend category among tourists is Shopping; this is dominated by International tourists who contributed 83.2% of Shopping revenue. Spend in this category grew by 16.4% to R26.6 billion. Domestic is growing the fastest and despite having a smaller share Domestic tourists grew by 31.6% to reach R4.5 billion in 2016 from R3.4 billion in 2015. International Shopping spend also grew by 13.8% to reach R22.2 billion in 2016

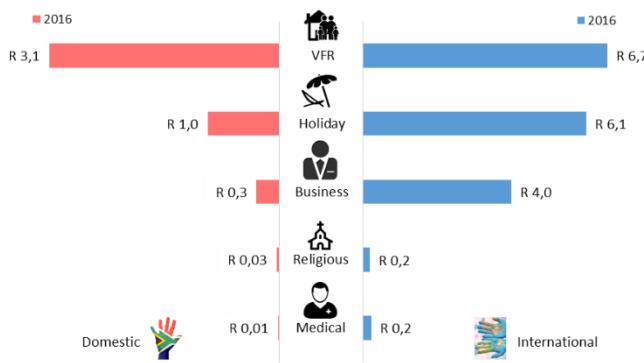

from R19.5 billion in 2015.

Food Sector spend is the second largest contributor to tourism revenue and was the leader of growth among the spend categories, up by 18.6% in 2016 to reach R16.4 billion. International tourists contribute R11.7 billion which is 71.4% of the food spend in 2016.

VFR and Holiday tourists are the drivers of Food spend contributing just under three-quarters of Domestic spend on Food and just under two-thirds for International tourists.

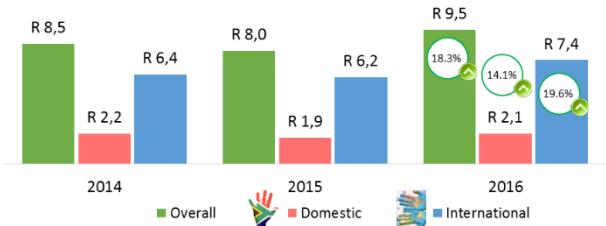

International MICE tourists contribute well over half of Business spend on Food and this has been on the rise from 2013, growing by 12.7% to reach R1.5 billion in 2016.

Leisure sector spend by tourists was among the leaders in growth, and saw an increase of 18.3% in 2016 to reach R9.5 billion.

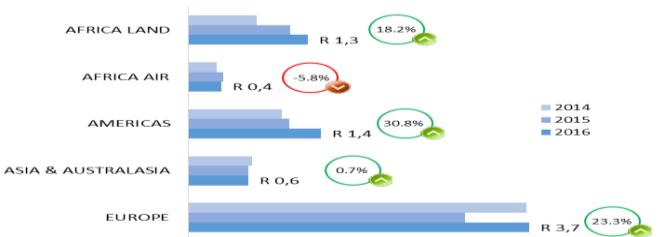

International tourists spend on Leisure makes up over three quarters of the spend category and were the drivers of the growth with a 19.6% increase over 2015, while Domestic also grew in double-digits adding 14.1% in 2016. Holiday are the main drivers of spend on Leisure in 2016 to reach R3.8 billion which double the spend among VFR tourists. On the Domestic front however VFR and Holiday jointly contribute 81.7% of the Leisure spend.

Western Cape attractions dominate the top tourist landmarks and attractions visited in South Africa by International tourists and this has been consistent over the years with 13 of the Top 20 in 2016 from this province.

Africa-Air contributes the least to Leisure spend and contracted by -5.8% from 2015. Asia & Australasia saw slight growth in Leisure spend, growing by 0.7% and is a region not as engaged in Leisure while visiting in South Africa. Europe, is the largest contributor with more than double the spend on Leisure than the next largest region, grew by 23.3% in 2016 to reach R3.7 billion. Americas led growth with a 30.8% uptick in Leisure spend to reach R1.4 billion, while Africa-Land grew by 18.2% to reach R1.3 billion.

International MICE tourists spend on Leisure is more than half of Business Leisure spend and has been on the decline over the recent years

Appendix A

	2015	2016	Difference	% Change

Appendix 1: Monthly Tourist Arrivals Table B

TABLE B - JANUARY 2016							
TOTAL TOURIST ARRIVALS EXCLUDING TRANSIT TOURISTS							
A tourist is an overnight visitor taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure or other personal purpose) other than to be employed by a resident entity in the country or place visited. As of 2014, Statistics SA is no longer able to provide statistics on Transit Tourists and therefore a new baseline is now created.

TABLE B - APRIL 2016
TOTAL TOURIST ARRIVALS EXCLUDING TRANSIT TOURISTS

A tourist is an overnight visitor taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure or other personal purpose) other than to be employed by a resident entity in the country or place visited. As of 2014, Statistics SA is no longer able to provide statistics on Transit Tourists and therefore a new baseline is now created.

TABLE B - DECEMBER 2016
TOTAL TOURIST ARRIVALS EXCLUDING TRANSIT TOURISTS

A tourist is an overnight visitor taking a trip to a main destination outside his/her usual environment, for less than a year, for any main purpose (business, leisure or other personal purpose) other than to be employed by a resident entity in the country or place visited. As of 2014, Statistics SA is no longer able to provide statistics on Transit Tourists and therefore a new baseline is now created.

Blank cells indicate that the sample is not big enough for a valid statistical interpretation
All spend data reported in this document represents the weighted sample average
The average spend reported per category would not add up to the total spend per trip, as reported by respondents.
This is because not all respondents incur expenses in all categories.

¹Total cost for the trip reported by the respondent and included all expenses (including airfare) for the trip.
²Total prepaid expenses is reported by the respondent and includes all expenses incurred in (home country, other country and prepaid costs in SA).
³Total expenditure in South Africa is reported by the respondent and represents all expenses paid for in South Africa.

Appendix 16: Collection of Tourism Statistics in South Africa

Who is a Tourist?

According to global standards, a tourist is any visitor travelling to a place other than that of his/her usual environment for more than 1 night but less than 12 months, and whose main purpose of the trip is other than the exercise of an activity remunerated from within the place visited. There three types of tourists:

Inbound tourist - A non-resident visitor who visits within the economic territory of the country of reference.

Domestic tourist - A resident visitor who visits within the economic territory of the country of reference.

Outbound tourist - A resident visitor who visits outside the economic territory of the country of reference.

As part of the project to develop a Tourism Satellite Account (TSA) for South Africa, Department of Environmental Affairs and Tourism and Statistics South Africa and SA Tourism undertook an exercise to develop a set of tourism definitions that are aligned to the UNWTO's International Recommendations for Tourism Statistics (IRTS). This process involved user consultation and the approved definitions now form part of the official statistics framework for South Africa. For the complete list of concepts and definitions, please consult Statistics SA's publication "Concepts and Definitions for Statistics South Africa 2007" (www.statssa.gov.za).

How is inbound tourism measured in South Africa?

There are two primary sources of inbound tourism data in South Africa: the Department of Home Affairs (DHA) movement control system which is used at all borders in South Africa; and the South African Tourism's Departure Surveys.

SA Tourism's Departure Surveys

The Departure Survey was designed to provide SA Tourism with information to support its marketing strategies. However, over time, the need for this information spread beyond just SA Tourism and requests for information on the international tourism market in South Africa were received from other users. The Departure Survey is the only detailed source of data on the international tourist market in South Africa.

The Departure Survey measures the travel behaviour of foreign tourists as they leave SA from both land and air ports of entry (the number of people arriving by sea is statistically insignificant). As it is not possible to interview every tourist leaving the country, a stratified random sample is used and the results are subsequently weighted up to the arrivals population in a given time period. This allows us to continuously track more specifically *expenditure* patterns, accommodation usage, travel behaviour, experiences, buying-process and travel patterns.

Data is collected using computer-aided personal interviewing method where a structured questionnaire is completed by qualifying respondents. In the Departure Survey it is almost impossible to back check as the survey deals with foreign tourists who are departing the country. Conducting back checks on foreign tourists is costly. To reduce response errors the field coordinator, field supervisor, and field manager check errors on the questionnaires before data processing. During the 2003 to 2005 period rejection of questionnaires was commonly used but since the beginning of year 2006 imputation methods are being used. For most of the questions in the Departure Survey the item non response rate is zero. The total spend in South Africa has an item non response rate non response of 0.8% rate and justifies using face to face interviews rather than self-completion.

Two main reports are released based on this survey: SA Tourism's quarterly and annual tourism reports. These reports are posted on our website www.southafrica.net/research.

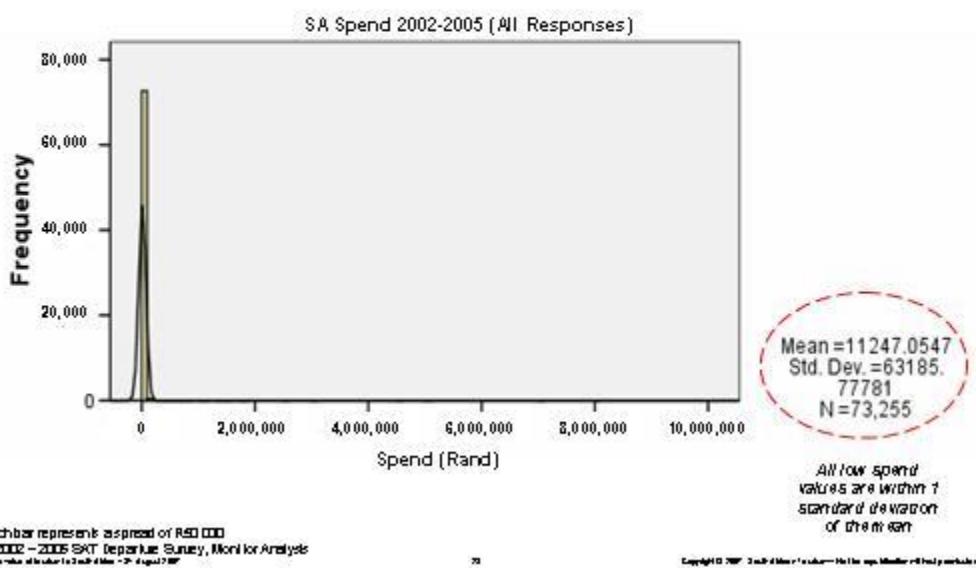

For more details on the methodology used in the survey, please consult our website. SA Tourism's Departure Survey is weighted using the data published by StatsSA. Should this data be incorrect, there would be a direct impact on the data released by SA Tourism.

Appendix 17: Normalising departure survey spend data

South African Tourism undertook a review to analyse its performance over the past four years. In those four years we have grown the survey of air arrivals from a summer and winter survey to a monthly survey at two airports and started surveying land arrivals at the 10 busiest land border posts on a monthly basis as well. The review was an opportunity to measure what has been achieved in the past four years in marketing, but also gave us the opportunity to review the Departure Survey methodology with the hindsight of trend data.

Of particular concern to us was the spend data which we have been cleaning on a quarterly basis by necessity. Analysis of spend data showed that the distribution of spend closely displays an exponential curve rather than a normal curve that we have been using in our cleaning rules.

SA Spend distribution is much closer to an exponential curve than a normal curve; the majority of responses are below the mean with a few very high outliers

There are a large number of responses that fall below the mean while there are a few very large outliers. Scrutiny of the data revealed that the responses were indeed valid as those low spenders were mainly from SADC staying 1 or 2 nights, while the higher SADC spenders were purchasing items such as houses, motor cars, etc.. As expected, people who stay longer do spend more.

Furthermore, spend is seasonal and varies from month-to-month. Therefore, what is an outlier in one month, is not an outlier in the next month. Therefore, the rules for normalizing data must be consistent and take into account these seasonal variations.

Based on this information, SA Tourism has revised the methodology for normalizing spend data. This chapter provides the details of how the data has been normalized.

SA Tourism now normalizes the spend data by eliminating 3-standard deviations from the logarithmic mean.

$$y = \log_{10}(x)$$

Compute log of spend variable using the formula above

Calculate the mean of the result obtained in (1) above.

Determine the cut-off criteria using the following formula:

$$\text{Log_Low_cut_off} = \text{Mean} - 3^*\text{Stdev}$$

$$\text{Log_Upper_cut_off} = \text{Mean} + 3^*\text{Stdev}$$

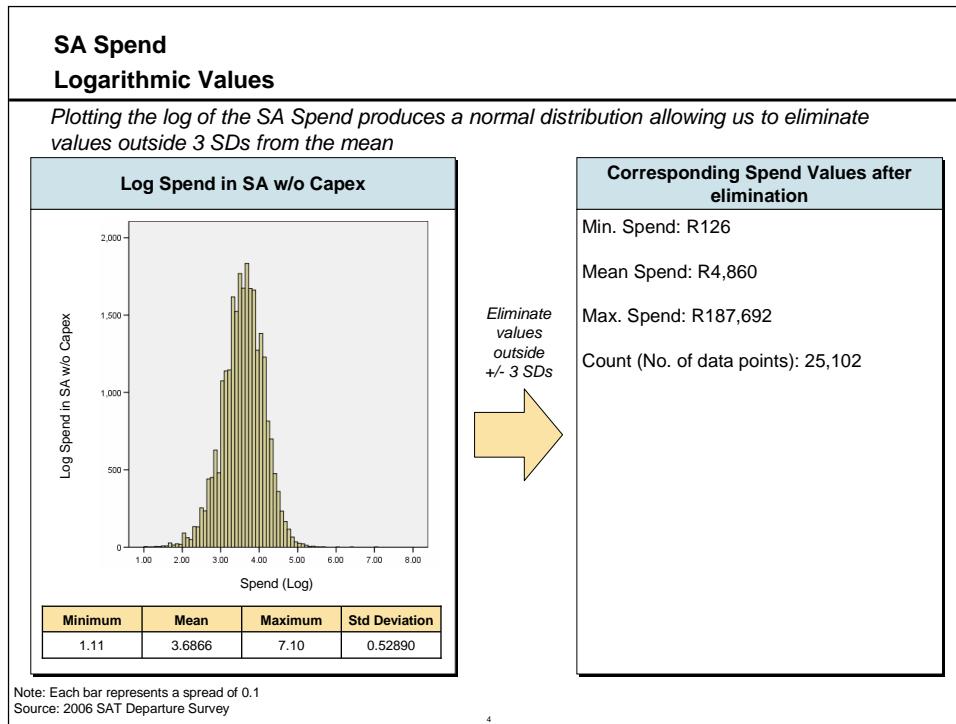

Transform the log values back to spend values using the following formula:

$$\text{Lower-cut-off Value} = 10^{(\text{Log_Low_cut_off})}$$

$$\text{Upper-cut-off Value} = 10^{(\text{Log_Upper_cut_off})}$$

Exclude all variables that fall outside the cut-off values.

The normalisation process leads to the following results for 2006:

The table below provides the confidence intervals at 95% confidence for the length of stay and spend estimates reported. This simply means that there is a 95% chance that the data reported falls between the ranges below.

TFDS (excluding capital expenditure)

	Mean	Lower bound	Upper bound
Land markets	R 4 700	R 4 473	R 4 944
Air markets	R 17 750	R 16 871	R 18 647
Total	R 8 130	R 7 727	R 8 540

Length of stay

	Mean	Lower bound	Upper bound
Land markets	7.68	7.30	8.07
Air markets	13.44	12.77	14.12
Total	9.18	8.72	9.64

Appendix 18: Concepts used in this report

The data in this report is based on statistics collected by the Department of Home Affairs at ports of entry to South Africa. It is processed and released by StatsSA and SA Tourism uses these statistics in good faith.

South African Tourism weights the results of its surveys to the tourist arrivals by air and road as released by StatsSA.

Compound Annual Growth Rate (CAGR) is the year over year growth rate applied to arrivals over a multiple-year period. The formula for calculating CAGR is:

$$(\text{Current Value}/\text{Base Value})^{(1/\# \text{ of years})} - 1$$

Blank spaces in any of the data tables within this report indicate that the sample sizes were too small to be significant and cannot be reported on accurately.

Total trip expenditure- the amount spent by foreign tourists on his/her entire trip including amounts spent in his/her home country and during his/her trip and stay at the destination. It is calculated by adding all prepaid expenses (including airfare) and expenses incurred in South Africa.

Prepaid trip expenditure - the amount spent by foreign tourists before his/her trip. These are calculated by adding all prepaid expenses incurred in the home country, any another country and prepaid expenditure in South Africa.

Total tourist foreign direct spend in South Africa (TTFDS) - the total amount spent directly in South Africa by all foreign tourists including amounts spent on goods for resale and capital investments.

Average total tourist foreign direct spend - the average amount spent directly in South Africa per foreign tourist for trip. This includes amounts spent on goods for resale and capital investments.

Average total tourist foreign direct spend per day - is calculated by dividing the TTFDS by the length of stay at a respondent level. The average of this new value is calculated for all respondents.

Capital expenditure - the amount spent by foreign tourists during his/her trip and stay at the destination on capital investments such as property, houses, motor cars, artwork, furniture, jewellery, financial assets, etc.

Expenditure on goods bought for resale - the amount spent by foreign tourists during his/her trip and stay at the destination on goods that will be resold.

Average spend reported per category would not add up to the total spend per trip, as reported by respondents. This is because not all respondents incur expenses in all categories. The average amounts spent per category do not reflect the average for all travellers but reflects the average level of expense incurred in that category by all tourists who reported incurring expenses in that category.

Appendix 19: Domestic Tourism

This report is based on the findings of the Domestic Tourism Survey, conducted from January 2011 to December 2016.

A sample of 1,300 random interviews, was conducted each month and gather information on the behaviour of domestic travellers.

The survey sample frame was stratified by province, population group, and geographic location. The final sample was determined by clustered EPSEM sampling. The results from the obtained samples were then reweighted to the broader population statistics, based on Stats SA's mid-year population estimates of South African citizens aged 18 and above. The main indicators were as follows:

Key Metrics	2014	2015	2016
Total Trips	28.0 million	24.5 million	24.3 million
Total Tourists	12.0 million	12.4 million	11.7 million
Trips by Purpose	VFR: 73% Holiday: 10% Business: 6%	VFR: 71% Holiday: 11% Business: 7%	VFR: 70% Holiday: 11% Business: 8%
Total Revenue	R26.8 billion	R23.6 billion	R26.5 billion
Spend by Purpose	VFR: 51%, Holiday: 22% Business: 20%	VFR: 52%, Holiday: 25% Business: 13%	VFR: 49% Holiday: 26% Business: 16%
Average Spend	R950 / Trip R230 / Day	R960 / Trip R230 / Day	R1,090 / Trip R250 / Day
Total Bednights	113.1 million	102.5 million	103.4 million
Average Nights	4.0 nights	4.2 nights	4.3 nights

Normalising domestic tourism spend data

The spend data for both 2007 and 2008 was skewed to the right, indicating that there were high value outliers present in both datasets. Because of the skewness of the variables in the domestic travel data (spend and bednights), it was necessary to normalise the data in such a way that it did not distort the travel patterns and had minimum distortion on the absolute values of the key variables. A methodology using above two standard deviations was considered suitable for this exercise, since it adjusts the data by less than 0.5% on either side of the distribution without distorting the actual distribution of the spend data per overnight trip. For details on the methodology used, please refer to the 2008 Annual Tourism Report on www.southafrica.net/research.

From 2009, the monthly survey data was audited to check for outliers and the data was normalised on a monthly basis to reduce the impact on the annual dataset. The monthly audit of the data involves a forensic analysis using trend analysis using the 2008 and 2009 data as a baseline. The result of the monthly audit is that there are no systematic deviations observed in the 2009 and 2010 dataset and no identifiable reason to normalise both datasets. This method will be used in future to ensure that there are no outliers in the dataset that could affect the results of the Domestic Tourism Survey.

Concepts used in the domestic tourism report

- In line with global definitions a domestic trip is defined as all those trips taken within the borders of South Africa by an adult resident in South Africa. For such a trip to be considered a domestic tourism trip, the trip must have
 - Been to a destination more than 40kms from the respondent's home (one way)
 - Lasted one night but less than 365 nights
 - Not been for relocation purposes
 - Not been part of the respondent's regular commuting (unless it was for leisure or recreational purposes)
 - Not result in the respondent receiving payment in the place visited for services rendered or goods delivered in the place visited.
- The data in this report is based on a monthly household survey of the South African adult population.
- The adult population is defined as the population over the age of 18 years and is estimated to be approximately 30 million people.
- A stratified random sample is drawn monthly. The sample is stratified according the spread of the population by province of residence, race (ethnicity) and community size.
- The community size definitions are based on the All Media And Product Survey (AMPS) definitions, where:
 - Rural: Less than 500 households
 - Small Town: 500 - 39 999 households
 - Large Town: - 40 000 - 249 999 households
 - Metro: 250 000+ households.
- An additional sample of travellers is drawn monthly based on the travel incidence determined from the monthly stratified random sample.
- The data is weighted to the population estimates as reported by StatsSA.
- Purpose of visit refers to the primary reason the trip was taken and is calculated by proportioning the number of trips in a specific month to the sum of the year.
- Accommodation usage - bednights is calculated by adding the accommodation in different types for each trip taken in the period.
- Total Domestic Direct Spend (TDDS) is calculated by adding the per capita spend for each trip taken in the period and reported in nominal terms, unless otherwise stated.
- Spend by purpose is calculated by proportioning the percentage of trips by purpose for the quarter to the TDDS.
- Flow of domestic direct spend is calculated by apportioning TDDS by the total number of bednights spent in each province for the inflow of value, and apportioning TDDS by the province of origin for the outflow of value.
- LSM refers to "Living Standards Measure". It is unique means of segmenting the South African market which has been developed by the South African Advertising Research Foundation. It cuts across race and other outmoded techniques of categorising people, and instead groups people according to their living standards using criteria such as degree of urbanisation and ownership of cars and major appliances. For more information, please visit www.saarf.co.za.

Appendix 20: Glossary of terms

Tourism is not an industry in the traditional sense because industries are classified according to the goods and services they produce, while tourism is a consumption-based concept that depends on the status of the consumer. This is the major reason for the difficulty in measuring tourism's contribution to the economy of any country.

With the growing significance of tourism globally and the increasing economic interdependence between countries, it is becoming vital that there is a common language for defining and measuring tourism statistics.

SA Tourism in conjunction with the Department of Environmental Affairs and Tourism and Statistics South Africa undertook an exercise to develop a set of tourism definitions that are aligned to global standards. This process involved user consultation and the agreed definitions are published in the Statistics South Africa document titled "Concepts and Definitions for Statistics South Africa 2007".

SA Tourism has now aligned its reporting to these approved definitions.

Visitor - Any person travelling to a place other than that of his/her usual environment for less than 12 months, and whose main purpose of the trip is other than the exercise of an activity remunerated from within the place visited.

Same day visitor - A visitor who visits a place for less than one night.

Tourist - A visitor who stays at least one night in the place visited.

Usual environment - To be outside the 'usual environment' the person should travel more than 40 kilometres from his/her place of residence (one way) AND the place should NOT be visited more than once a week. This includes place of work and place of study. Leisure and recreational trips are included irrespective of frequency.

Country of residence - If a person resides (or intends to reside) for more than one year in a given country and has there his/her centre of economic interest (e.g. his/her major source of income), he/she is considered as a resident of this country.

International traveller - Any person on a trip between two or more localities in different countries.

International visitor - Any person who travels to a country other than that in which he/she has his/her residence but outside his/her usual environment for a period that is less than 12 months and whose main purpose of visit is other than the exercise of an activity remunerated from within the country visited.

International tourist - An international visitor who stays at least one night in collective or private accommodation in the country visited.

Foreign traveler - A person who resides outside South Africa and visits the country temporarily.

Foreign visitor - Visitor who is a resident of another country.

Domestic tourist - A resident visitor who visits within the economic territory of the country of reference.

Domestic visitor - A visitor whose country of residence is the country visited. They may be nationals of this country or foreigners.

Trip - A journey undertaken by one or more members of the household for at least one night away from home, where a person did not receive any remuneration (did not make any profit) at that destination. It is important to note that a trip must be complete. That means a trip is only applicable when a person returns to his/her place of residence.
